

California State University Long Beach

Department of Kinesiology

Student Learning Outcomes

Undergraduate

Students will understand the biomechanical, physiological, psychological, and sociocultural bases of human movement within and across diverse populations, historical periods, and environmental conditions and apply this knowledge in academic and professional settings.

- Students will apply their Kinesiology-related knowledge and skills to think critically and ethically in examining issues and solving problems associated with their chosen subdiscipline.
- Students will communicate effectively and persuasively, both verbally and in writing, in academic and professional settings.
- Students will demonstrate the importance of physical activity in fostering optimal health by maintaining a physically active lifestyle.
- Students will demonstrate professional and community engagement through participation in fieldwork, internships, and and/or service learning activities.

Graduate

Upon completion of the MA/MS Degree, students are expected to attain the following learning outcomes:

- Students will apply their Kinesiology-related knowledge and skills to think critically and ethically in examining issues and solving problems associated with their chosen subdiscipline.
- Students will communicate effectively and persuasively, both verbally and in writing, in academic and professional settings.
- Students will interpret, evaluate, and apply the professional literature of their chosen Kinesiology subdiscipline.
