

A Research Technician, Research Associate, or Research Assistant position is available immediately to develop and study human antibodies against *Candida albicans*. The position involves conducting research projects, assisting in management of day-to-day lab operation, and training student researchers. Skills and experience in gene cloning, DNA sequence analysis, immunofluorescence microscopy, mammalian cell culture, and/or experimental mice are highly desirable. Minimum qualifications include a BS in life sciences and one year bench top research experience. A MS training in molecular genetics is desirable. All qualified applicants will be considered. Salary level will be commensurate with training and experience.

Interested applicants should send a resume, a statement of lab experience, a statement of commitment to research, transcripts of all undergraduate and graduate course work (if applicable), names of two or three professional references by mail, email, or FAX to
