

CONNECTING A LAPTOP'S AUDIO CABLES TO A SMART PANEL

The Smart Panel's audio cable connections are located on the lower left hand corner of the panel in the laptop column. The older Smart Panels take a stereo mini to mini cable. Both ends of a stereo mini to mini cable are the same. One end is plugged into the laptop (where depends on your laptop) and the other into the Smart Panel's audio cable connection.

The newer Smart Panels take an RCA to mini cable. An RCA to mini cable has two prongs at the RCA end and one prong at the mini end. In that case the RCA end of the cable (two prongs) is inserted into the Smart Panel as shown (WHITE on the left, RED on the right) and the Mini end is inserted into your laptop (where depends on your laptop)
