

Newberger, MATH 112-16, Spring 05

Homework due Tuesday, February 22

Carefully explain your solutions to each of the following mixing problems: page 93-94 #36, 37, 39, 40, and 41. Since the problems are not stated with significant figures in mind, simply round your answers to the nearest hundredths place, rather than using the rules for calculating with significant figures.
