

**Creativity Exercise**  
*and Powerpoint Presentation*

**Tuesday**

PowerPoint Slide (only 1) with the following...

- Who am I?
- What project am I working on?
- What is my Functional Responsibility?
- What problems do I see moving forward?
- I have selected this problem for the (Green&Red, Blue&Orange) group to help me with. You may want to apply the Dunker Diagram to arrive at the right problem. Be sure to show on the first page if you did use the Dunker Diagram.
- This is the creative technique (1) I will be employing (no more than 2 techniques per group (Green&Red, Blue&Orange)).

End of Class Tuesday

**Thursday**

I was the monitor to solve this problem using this creative technique. I spent TBD minutes leading the activity.

PowerPoint Slides (1 or 2) with the following...

- Here are the highlights of my problem-solving meeting. Tables work well here. Notice the number of iterations we applied to arrive at the solution.
- Here is a little more on this solution.

End of Class Thursday

**Tuesday**

I give a T/N minute PowerPoint presentation with 2 - 3 pages. My video and audio will be turned off after my time has expired.

- T = class & lab time - [3 x N minutes between presentations + 15 minutes to start (get everyone organized) + 10 minutes to end (closing thoughts by Myself and Chris)].
- N = number of students.

End of Class Tuesday
