I. Process Costing: Used to allocate costs to Work-In-Process (WIP) and finished goods (and provide a basis to estimate the cost to complete work) for homogeneous products
A. The Basic Process Costing Model: Computation of Equivalent Units (EU) of Production

- Estimates are based on three parameters (factors of production): DM, DL,OH
- Cost allocation models must account for the fact that the factors of production are applied unevenly.

## Example 1:Simple Example, One department several process:

Assume the LBSU incurred the following costs for the period:
DM:
DL
OH
\$ 78,000
104,000
$\begin{array}{r}30,000 \\ \hline \$ 212,000\end{array}$

Additional Data:

- One hundred units were started in process and 20 units were finished LBSU has four production departments ( $A, B, C, D$ ) and a finished goods (FG) department

## Requirements:

1. Compute cost per finished unit
2. Identify the DM, DL and OH components contained in finished units
3. Compute total WIP
4. Identify the DM, DL and OH components contained in WIP
5. Compute the costs necessary to complete WIP during the next period
6. Identify the DM, DL and OH components necessary to complete WIP in the following periods

Compute Equivalent Units of Production by Department: EU of production:

Compute EU:

|  |  | terials |  |  | Labor |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Dep | reakdo |  | Dept | Breakd |  | oept | 3realdo |  |
| Dept | Units | 2\% | EU | Units | £\% |  | Units | $5 \%$ | EU |
| A | 20 | 50\% | 10 | 20 | 20\% |  | 20 | 20\% | 4 |
|  |  |  |  |  |  |  | 20 |  |  |
| B | 20 | 70\% | 14 | 20 | 30\% | 6 | 20 | 40\% | 8 |
| E | 20 | 80\% | 16 | 20 | 40\% | 8 | $20$ | 60\% | 12 |
| D | 20 | 90\% | 18 |  | 70\% | 14 | 20 | 80\% | 16 |
| FG | 20 | 100\% | 20 | /20 | 100\% | 20 |  | 100\% | 20 |
|  | 100 |  | 78 | 100 |  | 52 | 100 |  | 60 |
|  |  | 78\% |  |  | 52\% |  |  | 60\% |  |

## Solution:

1. Compute cost per finished unit
2. Identify the DM, DL and OH components contained in finished units

| FG |  |  |  |  | Unit Cost |  | Units Complete | $\Sigma$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DM | $\Sigma$ Cost | = | \$78,000 | = | \$1,000 | x | 20 | 20,000 |
|  | EU |  | 78 |  |  |  |  |  |
| DL | $\Sigma$ Cost | = | \$104,000 | = | \$2,000 | x | 20 | 40,000 |
|  | EU |  | 52 |  |  |  |  |  |
| OH | $\Sigma$ Cost | = | \$30,000 | = | \$500 | x | 20 | 10,000 |
|  | EU |  | 60 |  |  |  |  |  |
|  | Totals |  |  |  | \$3,500 |  |  | \$70,000 |

3. Compute total WIP
4. Identify the DM, DL and OH components contained in WIP
5. Compute the costs necessary to complete WIP during the next period
6. Identify the DM, DL and OH components necessary to complete WIP in the following periods

| Proof: | Total/unit |  | Total Units | $\sum$ |
| :--- | :---: | :---: | :---: | :---: |
| Est Total Costs: | $\$ 3,500$ | $\times$ | 100 | $\$ 350,000$ |
| Less: Cost Incurred to date: |  |  |  | $\$ 212,000$ |
| Cost to Complete: |  |  |  | $\$ 138,000$ |

B. Process Costing Through Departments: Shrinkage

1. Most processes are departmentalized and run through several departments prior to completion (an example would be assembly, finishing, painting, testing etc.)
2. Each department is a cost center
3. Losses such as shrinkage, breakage or evaporation are normal, so the number of units that exit a department will typically be less than the number entering and the remaining units must bear the full cost of production.
a. Units lost are subtracted from total units to arrive at EU
b. The department where losses are incurred must make the adjustment.

Example 2: Accounting for shrinkage, loss or evaporation

| Department | Units Started | Units Lost | Units Finished | Total Cost |
| :---: | :---: | :---: | :---: | :---: |
| A | 11,000 | 1,000 | 10,000 | $\$ 20,000$ |
| B | 10,000 | 2,000 | 8,000 | 40,000 |
| Total |  |  |  | $\$ 60,000$ |

Department A transfers 10,000 units to Dept. B @ \$2/ea for a total of \$20,000. Dept. B looses an additional 2,000 units and makes the following adjustment:

|  | Units | Units Lost | Total Cost |
| :---: | :---: | :---: | :---: |
| Units Received | 10,000 | $\$ 2.00$ | $\$ 20,000$ |
| Units Lost | $\underline{(2,000)}$ | $\underline{50}$ |  |
| Adjusted Amounts | 8,000 | $\$ 2,50$ | 20,000 |
| Dept. B Cost | 8,000 | $\$ 5.00$ | $\underline{40,000}$ |
| Finished Goods | 8,000 | $\$ 7.50$ | $\$ 60.000$ |

C. Process Costing Through Departments: Cost of Production Schedule

1. The standard process cost report is called a cost of production schedule and contains seven components:
a. Quantity Schedule
b. Cost from Preceding Department
c. Beginning WIP
d. Current Production Costs
e. Cost Transferred to Next Department
f. Ending WIP
g. Percentage of Completion for Beginning and Ending WIP

Example 3: Cost of Production Schedule

| Period 2 |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Qty Sched | Department A |  | Department B |  | Department C |  |
| a |  | Units | Units | Units | Units | Units | Units |
|  | BOY WIP |  | 2,000 |  | 1,000 |  | 1,000 |
|  | Units Started |  | 15,000 |  |  |  |  |
|  | Units In |  |  |  | 14,000 |  | 12,000 |
|  | Units Lost | 1,000 |  | 1,000 |  | 1,000 |  |
|  | Units Out | 14,000 |  | 12,000 |  | 10,000 |  |
|  | EOY WIP | 2,000 |  | 2,000 |  | 2,000 |  |
|  | Total | 17,000 | 17,000 | 15,000 | 15,000 | 13,000 | 13,000 |

|  | Period 2 <br> Cost Incurred |  |  |
| :---: | :---: | :---: | :---: |
|  | Dept A | Dept B | Dept $C$ |
| DM | \$76,680 | \$60,480 | \$48,840 |
| DL | \$49,700 | \$94,500 | \$61,800 |
| OH | \$29,820 | \$71,250 | \$42,800 |
|  | \$156,200 | \$226,230 | \$153,440 |

Required: Complete the following Schedule for Periods 1 and 2

1. Compute the EU of Production for Periods 1 and 2
2. Complete the following Cost of Production Schedules for Periods 1 and 2

Suggestion: Make a copy of the schedules
Period 1

Period 2

## Solution:

1. Compute the EU of Production for Periods 1 and 21.

EU of Production Period 1

|  | Department A |  |  |  | Department B |  |  |  | Department $C$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \% | In Process | Trans | Total | \% | In Process | Trans | Total | \% | In Process | Trans | Total |
| DM | 50\% | 1,000 | 8,000 | 9,000 | 80\% | 800 | 6,000 | 6,800 | 100\% | 1,000 | 4,000 | 5,000 |
| DL | 30\% | 600 | 8,000 | 8,600 | 40\% | 400 | 6,000 | 6,400 | 50\% | 500 | 4,000 | 4,500 |
| OH | 20\% | 400 | 8,000 | 8,400 | 50\% | 500 | 6,000 | 6,500 | 50\% | 500 | 4,000 | 4,500 |

Periodsss 2 EU of Production Schedule

|  | Department A |  |  |  |  | Department B |  |  |  |  | Department C |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | EOY | BOY |  |  |  | EOY | BOY |  |  |  | EOY | BOY |  |  |
