Outline

Volumes of solids of rotation

Replace all x's with y's in the following formulas to get other valid expressions for volume.

Disks:

Vol $= \int_a^b \pi(\text{radius in terms of x})^2 dx$

Shells:

Vol $= \int_a^b 2\pi(\text{radius in terms of x})(\text{height in terms of x}) dx$

Washers:

Vol $=$

$\int_a^b \pi(\text{outer radius in terms of x})^2 - \pi(\text{inner radius in terms of x})^2 dx$

Volumes of solids of rotation

Replace all x's with y's in the following formulas to get other valid expressions for volume.

Disks:

Vol $= \int_a^b \pi(\text{radius in terms of x})^2 dx$

Shells:

Vol $= \int_a^b 2\pi(\text{radius in terms of x})(\text{height in terms of x}) dx$

Washers:

Vol $=$

$\int_a^b \pi(\text{outer radius in terms of x})^2 - \pi(\text{inner radius in terms of x})^2 dx$

Exercise: Find the volume of the object obtained by rotating the region bounded by $y = 2x^2 - x^3$ and $y = 0$ about the y-axis.

Volumes of solids of rotation

Replace all x's with y's in the following formulas to get other valid expressions for volume.

Disks:

Vol $= \int_a^b \pi(\text{radius in terms of x})^2 dx$

Shells:

Vol $= \int_a^b 2\pi(\text{radius in terms of x})(\text{height in terms of x}) dx$

Washers:

Vol $=$

$\int_a^b \pi(\text{outer radius in terms of x})^2 - \pi(\text{inner radius in terms of x})^2 dx$

Exercise: Find the volume of the object obtained by rotating the region bounded by the curves $y = cos(x) + 1$, $y = 0$ and $x = 0$ that contains $(1, 1)$ about the x-axis.

Volumes of solids of rotation

Replace all x's with y's in the following formulas to get other valid expressions for volume.

Disks:
Vol $= \int_a^b \pi(\text{radius in terms of x})^2 dx$

Shells:
Vol $= \int_a^b 2\pi(\text{radius in terms of x})(\text{height in terms of x}) dx$

Washers:
Vol $=$
$\int_a^b \pi(\text{outer radius in terms of x})^2 - \pi(\text{inner radius in terms of x})^2 dx$

Exercise: Find the volume of the object obtained by rotating the region bounded by the curves $y = cos(x) + 1$, $y = 0$ and $x = 0$ that contains $(1, 1)$ about the y-axis.

The length of a curve

Lets find the length of a curve by approximating by line segments.

The length of a curve

Lets find the length of a curve by approximating by line segments.

If f is continuous on the interval $[a, b]$, then the length of the graph of f from a to b is

$$L = \int_a^b \sqrt{1 + (f'(x))^2}$$

The length of a curve

Lets find the length of a curve by approximating by line segments.

If f is continuous on the interval $[a, b]$, then the length of the graph of f from a to b is

$$L = \int_a^b \sqrt{1 + (f'(x))^2}$$

Example: Find circumference of the circle $x^2 + y^2 = 4$.

The length of a curve

Lets find the length of a curve by approximating by line segments.

If f is continuous on the interval $[a, b]$, then the length of the graph of f from a to b is

$$L = \int_a^b \sqrt{1 + (f'(x))^2}$$

Example: Find circumference of the circle $x^2 + y^2 = 4$.
Example: Find the length of the curve $y = ln(cos(x))$ between $x = 0$ and $x = \frac{\pi}{3}$
