

GLITTER IS LITTER!

Metallic and plastic confetti can have unintended consequences

Confetti washes ashore, luring **seagulls** with its shiny sparkle.

In their search for food, **zooplankton** unknowingly ingest the contaminants.

Pink Shrimp eat the zooplankton.

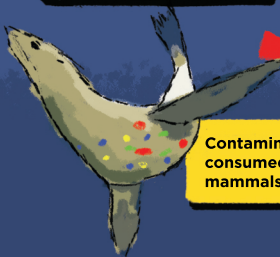

California Surf Perch consume the zooplankton and shrimp.

Barred Sand Bass prey on the Surf Perch.

Contaminated fish are consumed by marine mammals such as **sea lions**.

We can end up eating microplastics and contaminants from **grad photo confetti!**
