

At Canam Technology, you are part of a dynamic team with a challenging work environment and the opportunity to learn a broad scope of engineering. We are a leader in transit communications; we design and manufacture DSP based equipment, and we design and integrate radio systems for major transit projects in California, nationally and internationally. Our Long Beach team builds and integrates our systems, along with radio field testing and engineering. We are seeking engineers-in-training who can work as part of a team and have the ability to learn, retain and apply new skills. We have opportunities for part-time projects during the school year, full-time experiences in the summers, and full-time project positions upon graduation. Engineers in training are compensated at \$15 to \$30 per hour.
