Bryan Calungcagin, area lead for Area 67, oversees daily operations. In a past life, he served on a pit crew for a private Porsche racing team. Today, he waxes poetic about advanced fire-barrier testing. "The mobile test stand was built to test space and aircraft fire protection materials with an FAA-certified jet fuel burner. I was lead test conductor for a team that showed fire protection materials could withstand a temperature of a 2,200-degree-Fahrenheit jet fuel flame." The surface of Venus cooks at a frosty 860 degrees Fahrenheit in comparison.
