### Task: Hammer Drill

- **Name of Shop or Dept:** Civil Construction Engineering Management
- **Location(s):** EN3-119 Construction Methods Lab
- **Analyzed by:** M.HOM
- **Date:** 03/10/17

### Required PPE:

- safety glasses
- safety gloves

### Required/Recommended Trainings:

- Read & understand operator manual.
- Power tool safety class.
- Hand tool safety class.
- First aid class.

<table>
<thead>
<tr>
<th>TASK</th>
<th>HAZARDS</th>
<th>CONTROLS</th>
</tr>
</thead>
</table>
| 1. WORK AREA SAFETY | 1a. Cluttered or dark areas  
1b. Power tools create sparks which may ignite the dust or fumes.  
1c. Distractions can cause you to lose control. | 1a-1. Insure the work area is free of clutter, and is well lit.  
1b-1. Do not operate power tools in explosive atmospheres.  
1c-1. Keep bystanders away while operating a power tool. |
| 2. ELECTRICAL SAFETY | 2a. Power tool plugs must match the outlet.  
2b. Increased risk of electric shock if your body is earthed or grounded.  
2c. Do not expose power tools to rain or wet conditions.  
2d. Do not abuse the cord.  
2e. Damaged or entangled cords increase the risk of electric shock.  
2f. When operating a power tool outdoors. | 2a-1. Never modify the plug in any way.  
2a-2. Do not use any adapter plugs with earthed (grounded) power tools.  
2a-3. Unmodified plugs and matching outlets will reduce risk of electric shock.  
2b-1. Avoid body contact with earthed or grounded surfaces such as pipes, radiators, ranges and refrigerators.  
2c-1. Water entering a power tool will increase the risk of electric shock.  
2d-1. Never use the cord for carrying, pulling, or unplugging the power tool.  
2d-2. Keep cord away from heat, oil, sharp edges, or moving parts.  
2e-1. Replace damaged cords. Do not attempt to repair.  
2f-1. Use of a cord suitable for outdoor use reduces the risk of electric shock. |
| 3. PERSONAL SAFETY | 3a. Stay alert.  
3b. Use safety equipment.  
**NOTE:** Safety equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.  
3c. Avoid accidental starting.  
3d. A wrench or a key left attached to a rotating part of the power tool. | 3a-1. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.  
3a-2. Watch what you are doing and use common sense when operating a power tool.  
3b-1. Always wear eye protection.  
3c-1. Ensure the switch is in the off- position before plugging in.  
3c-2. Avoid carrying tools with your finger on the switch or plugging in power tools that have the switch on.  
3d-1. Remove any adjusting key or wrench before turning the power tool on. |

</tr>
</tbody>
</table>

| 3e. Do not overreach. | 3e-1. Keep proper footing and balance at all times. |
| 3f. Dress properly. | 3f-1. Do not wear loose clothing or jewelry. |
| 3g. If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. | 3f-2. Keep your hair, clothing and gloves away from moving parts. |
| 3g-1. Use of these devices can reduce dust-related hazards. | 3g-1. Use of these devices can reduce dust-related hazards. |

4a-1. Hold power tools by insulated gripping surfaces when performing an operation where the cutting tool may contact hidden wiring or its own cord.

4b-1. Use clamps or another practical way to secure and support workpiece to a stable platform.

4b-2. Keep hands away from all cutting edges and moving parts.
6a. Installing Drill Bits and Chisels.
6b. Using bits larger than the maximum recommended capacity of the drill.
6c. Inserting bit into chuck.

**NOTE:** Only use accessories with SDS shanks.

**NOTE:** Use caution when handling hot bits and chisels

6d. Adjusting the Side Handle Position

**NOTE:** The side handle can be locked in increments of 30 degrees.

6e. Setting the Depth Gauge

**NOTE:** The drilling depth is the distance between the tip of the bit and the tip of the depth gauge rod.

6f. Selecting Action

**NOTE:** To engage the hammering mechanism, maintain pressure on the bit.

6g. Using Forward/Reverse Lever

**NOTE:** When drilling with hammer action, use the tool in forward rotation (clockwise) only.

6h. Starting, Stopping & Controlling Speed

6i. Operating

- 6a-1. Be sure that the shank of the bit is clean.
- 6a-2. Dirt particles may cause the bit to line up improperly.
- 6b-1. Do not use bits larger than the maximum recommended capacity of the drill because gear damage or motor overloading may result.
- 6c-1. Insert the bit or chisel into the nose of the tool.
- 6c-2. Rotate bit slowly until it aligns with the locking mechanism.
- 6c-3. Push bit into tool until it locks.
- 6c-4. Check that the bit is locked properly; it should be possible to pull the bit back and forth slightly (about 1/4”).
- 6c-5. To remove bits and chisels, pull bit holder release collar toward the rear of tool and remove bit.
- 6d-1. Loosen the clamping screw slightly.
- 6d-2. Pull the side handle forward and turn it to the required angle.
- 6d-3. Fit the side handle into the non-slip mounting until it adjusts into place and retighten the clamping screw securely.
- 6e-1. Loosen the clamping screw.
- 6e-2. Slide the depth gauge rod backward or forward until it is set for the desired depth.
- 6e-3. Tighten the clamping screw securely.
- 6f-1. For drilling, turn the selector lever to the drill symbol.
- 6f-2. For drilling with hammer action; turn the selector lever to the hammer-drill symbol.
- 6f-3. When pressure on the bit is released, the hammering action will stop.
- 6g-1. For forward (clockwise) rotation, push the forward/reverse lever to the symbol.
- 6g-2. For reverse (counterclockwise) rotation, push the forward/reverse lever to the symbol.
- 6h-1. To start the tool, pull trigger.
- 6h-2. To stop the tool, release trigger.
- 6h-3. To vary the speed, increase or decrease pressure to trigger. The further the trigger is pulled, the greater the speed.
- 6i-1. Position the tool, grasp the handles firmly and pull the trigger. Always hold the tool securely using both handles and maintain control.
- 6i-2. This tool has been designed to achieve top performance with only moderate pressure. Let the tool do the work.
- 6i-3. If the speed begins to drop off when drilling deep holes, pull the bit partially out of the hole while the tool is running to help clear dust.
- 6i-4. Do not use water to settle the dust since it will clog the bit flutes and tend to make the bit bind in the hole.
